Student's Name: Murphy, Owen

This form is only for the students that have never logged into the computers in the School of Engineering and Computer Science. Please use your existing password if you have used our systems before!

Welcome

to the

School of Engineering and Computer Science

Using the ECS Computers

Each student and faculty member in the School has an account on our Windows systems. This account is maintained by the systems managers for the School of Engineering and Computer Science (ECS). Most **account names** are simply **your last name** not your BearID. This is done to limit the use of our labs to those students who are taking classes from the school and to help keep lab equipment open for your use. Access to these ECS labs is via your Baylor ID card. By using the ECS computational labs, you agree to abide by the ECS Lab Policy as well as Baylor's Information Systems Usage Policy. Please remember access to these labs is a privilege not a right and may be revoked for failure to abide by the Lab Policies.

Logging on:

At the bottom of this page, you will find your user name and initial Password. This will be the user name you will use to tell the system who you are. To log onto an ECS system, hold down the **Ctrl, Alt, and Delete keys at the same time** and then release them. Type in your user id (not your BearID) and your password in the appropriate spaces.

Profiles:

Your account has been created using a Mandatory Profile. Any changes you make to the system including saving documents to My Documents or the Desktop will be lost when you log off. Please store all of your data on a USB Flash drive or the Network Shared Drive (see Directory Space below)

Password change and suggestions:

The first time you log on, you must change the password that was originally given to you. Also, **DO NOT** use **passwords** like these because they are **easily guessed:**

Baylor	Gobears
Your name or any part of it	Your Baylor ID number
Your phone number	The same password as your BearID (E-mail) password

Standard English words

We suggest that you use a combination of upper and lowercase letters, numbers, and special characters. Finally, all passwords need to be **at least eight characters** in length. An example of **a good password** is B4i29W79!

You are required to change your password every 180 days. If you would like to change your password any other time, press **Ctrl, Alt, and Delete keys at the same time** and Select **Change Password**. Should you forget your password, you can access the self service password reset tool by going to http://www.ecs.baylor.edu/ecsid/. If you need other assistance, please stop by and see the IT Support group in Rogers 318. Please be sure to bring your Baylor ID card with you when you come.

Locking Computers

If you are going to be away from your computer for a short time (not more than 20 minutes), press the Ctrl, Alt, and Delete keys together. Then press the **"Lock"** button. When you return to your machine, press Ctrl, Alt, and Delete again and then type in your password. If you leave your **computer locked and unattended for more than 20 minutes,** thereby depriving others lab users of the use of that machine, an administrator will override the lock and you will need to talk to the one of the Systems Managers before you can log on again.

Logging off:

When you are finished using the machine, **DO NOT restart it or shut it down**. You should instead select the "Logoff" option from the "Start" menu. Remember not to leave your workstation locked (see above)

Directory Space:

There is a limited amount of space available on the file server. This directory can be found by opening **This PC** and double clicking on the Network Shared Drive (usually drive letter **H**). We request that students keep their file space usage **below 250MB.**

Where to find additional help:

Additional information about the ECS Systems Group and our Windows systems can be found at http://www.ecs.baylor.edu/systems.
